MASK – EN

INSTRUCTIONS FOR THE CORRECT USE AND CARE

Read the instructions carefully to understand the function and handling of the products. For your own safety and more fun in the water.

EN 16805:2015

WARNING! Prior to using your diving mask it is important that you take note of the following information.

This product protects your eyes from direct contact with water. It complies with the requirements of directive EU 2016/425 and is assigned to PSE (Personal Safety Equipment) category 1.

INSTRUCTIONS FOR USE: Check the fit and tightness of your mask by pressing the mask against your face, breathing in through the nose to produce under-pressure. When holding your breath, the mask must cling to your face. Hair and beard under the sealing edge may affect tightness. The mask should cover the eyes and the nose. To put on the mask, use one hand to hold it to the face and the other hand to pull the mask strap back over the head. The strap should only need slight pressure, to pull the product on the face. Do not pull too tight. Also test whether the nostrils can be squeezed to equalize pressure, if required.

WARNING! Don't jump into the water face down with the mask on. Since the glass or the mask may break or crack under excessive stress it can also lead to personal damage. The use of this product by children must always be under direct control of adults. A faulty mask is extremely dangerous! Examine the condition of the product before use. If you find faults, don't use the mask. Even without damage it is recommended not to use any protective equipment for more than 5 years.

SAFETY TIPS: The mask glass complies with the requirements of the impact test (American National Standard ANSI Z 86.11- 1985). To prevent the glass from misting up, retain a small amount of water in the mask and use it to wash around the screen with a shake of the head whenever the face mask steams up. Extra Anti-fog treatment or a little saliva on the inside of the glass also help. Wash it out with clear water after applying it.

CARE AND MAINTENANCE: To obtain the maximum life from any of these articles: Avoid unnecessary exposure to sunlight and air. Avoid contact with oils and greases. Some sun creams and lotions are of an oily composition. Avoid exposure to heat and contact with hot surfaces over 60°C. Store in a cool, dry place in a box or bag and in the dark, and do not distort during storage. Damaged parts must immediately be replaced using original **DYNAMICNORD** spare parts.
